

More Predictable Controls

Bobcat® compact excavators give you perfect control of the boom, arm and bucket, even in the most challenging work environments. Having confidence in this control and your precise movements enables you to complete the job using your machine, instead of doing it with manual

labour. This predictable control is delivered through exclusive control valve systems and torque-limiting piston pumps that match force with demand.

Retractable undercarriage

You can work in confined areas and squeeze through the tightest workspaces by retracting the tracks on Bobcat® E08, E10, E17, E19 and E20 compact excavators. The hydraulically activated retractable undercarriage is the ideal solution for access through narrow gates and doorways.

Two-Speed Travel

To raise your productivity, choose between two travel speeds to increase your speed around your jobsite.

Retractable Blade

You don't need any tools to adjust the blade extensions on E08, E10, E17, E19 and E20 models. You can easily remove the blade extensions and store them directly on the blade structure.

Fold-Down Tip Over Protective Structure (TOPS)

For easier access to your work area: pass under branches, low openings and through doorways to get to your jobsite.
